

Anton's Sand Control Techniques and Services

Professional Service Teams

Anton has 16 different teams that can provide sand control service and gravel packing service. The teams are equipped with advanced equipment and are ready to provide sand control services in the world.

The Key Sand Control Technology

Anton persists to develop and innovate its core technologies in sand control, and has received over 200 patents domestically and internationally.

Products Manufacture

Anton has established five research and manufacturing bases in Beijing, Tianjin, Dongying, Qindao and Suining to develop and produce its own sand control and completion tools. The manufacturing capability can achieve 200,000 m/year (screens) and allows custom design. Anton quickly responds to clients and ensure all sand control products are manufactured under ISO standards.

Application Performance

Anton has been expanding its international market and successfully provided its sand control and completion services over the world.

The sand control products and services have been extensively used in the oilfields of China, Canada, South America, Central Asia, Southeast Asia, and Africa. The application of the cumulative screen length has surpassed one million meters. The technical teams have provided sand control and gravel packing services for more than 5000 wells.
