

Coiled Tubing StageFRAC With Sleeve Technology

Setting bottom Packer to isolate the substratum zone and opening the sliding sleeve via the CT, which can fracture multiple zones in a single trip.

By providing the CT operation, specially designed sliding sleeves and fantastic bottom packer, Anton makes a perfect combination of CT operation and Completion.

Technical feature

- Continuous fracturing through CT increase operation efficiency greatly
- Switch sliding sleeve multiple times as required
- Unlimited number of frac stages, full-bore access

Application

- Capable for all kinds of casing
- All kinds of Completion Methods

Performance

- Successful application on 3 wells in Ordos Basin.
